Summary

Practical AI workflow builder focused on turning repeated manual operations into bounded, logged, testable systems. Strongest work is in lead intake, CRM cleanup, support macros, reporting, content repurposing, job/outreach packet generation, and internal operator dashboards.

Core Skills

- AI workflow design
 - n8n, Zapier, Make-style workflow architecture
 - OpenAI-compatible workflow and prompt design
 - JavaScript, Node.js, React, Vite, Express
 - Google Sheets, Airtable, Notion, CSV, JSONL workflows
 - Cloudflare Pages static deployments
 - systemd user timers and local worker loops
 - smoke tests, build gates, runbooks, and handoff docs

Selected Proof

EvoSchube AI Workflow Audit

Built and deployed a public service offer for a 48-hour workflow audit: workflow map, bottleneck list, automation fit score, review gates, and implementation plan.

- Offer: <https://evoschube-ai-agent.pages.dev>
- Sample deliverable: <https://evoschube-ai-agent.pages.dev/audit-sample.html>
- System proof: <https://evoschube-ai-agent.pages.dev/proof.html>

INCOME Automation Worker

Built and operated a local automation lane that runs lint, production build, smoke tests, sales packets, payment audits, job packets, systemd timers, and 480-minute sprint logs.

SaaS Portfolio Audit

Audited a portfolio of Next.js SaaS apps for build status, deployment blockers, reuse opportunities, and revenue potential. Grouped apps by shared Supabase, Stripe, Vercel, Anthropic, Resend, Twilio, and Google API setup.

Work Style

- Start with the current workflow and acceptance test.
- Build the smallest reliable automation first.
- Keep human review for customer-facing or sensitive actions.
- Log failures and make the handoff readable.
- Do not fake credentials, identity, payment, or platform compliance.
